«The International Journal of Prehistory» is a double-blind peer-reviewed yearly publication aimed to explore the plurality of vision on Prehistory in a broad and innovative perspective, focusing on the recent and most advanced methodological approaches around different areas of the World. In order to conceptualize better the complexity of ways to Prehistoric archaeology, the main goal is to share and to compare a large number of salient concrete examples throughout different geographic districts broadly defined, as Europe, Africa, Euro-Asian area and America. Original articles related to an area or a specific period within a larger region are welcome, by tacking between specific cultural dynamics and broader themes.

The main debate will be addressed to investigate main issues in the field of the Prehistory, firstly the ways we characterize the conditions of cultural achievement and the nature of the major changes, including social structure, human mobility, competitive processes, cycles of production and consumption, ideology, religious thought, questions of identities. Here the focus on broader regional studies enables us to display a diachronic sequence of the mechanisms behind specific phenomena of cultural changes as a whole of period-based maps, and it facilitates comparative researches between different geographical systems.

The structure of the journal is articulated into three main section: the first one collects original articles addressed to an area or in to a wider time-horizon. The second part includes papers about recent important acquisitions which provide critical sources of basic-data, and have became essential for the current theoretical concerns. Finally, the last section has to collect reviews and discuss of books on different themes and individual areas.

The prime language is English, but other languages can be accepted, including French, German and Italian.
